# Type advantage finder

You are given an enemy Pokémon and three of your own Pokémon.
Your task is to determine which of your Pokémon is the best choice to send into battle, based on type advantages.

You will receive input in JSON format:
```
{
  "enemy": {"name": "Charmander", "type": "fire"},
  "your_team": [
    {"name": "Squirtle", "type": "water"},
    {"name": "Bulbasaur", "type": "grass"},
    {"name": "Pikachu", "type": "electric"}
  ]
}
```

Your output should specify the best Pokémon to use:
```
{
  "best_choice": "Squirtle"
}
```

Use the simplified type chart below:

| Type | Strong Against |
| --- | --- |
| normal | - |
| fire | grass, ice, bug, steel |
| water | fire, ground, rock |
| grass | water, ground, rock |
| electric | water, flying |
| ice | grass, ground, flying, dragon |
| fighting | normal, ice, rock, dark, steel |
| poison | grass, fairy |
| ground | fire, electric, poison, rock, steel |
| flying | grass, fighting, bug |
| psychic | fighting, poison |
| bug | grass, psychic, dark |
| rock | fire, ice, flying, bug |

| ghost | psychic, ghost |
|-------|----------------|
| dragon | dragon |
| dark | psychic, ghost |
| steel | ice, rock, fairy |
| fairy | fighting, dragon, dark |

A Pokémon is strong if its type is listed as "strong against" the enemy type.

If multiple Pokémon have type advantage, any of them is considered a correct answer.

If none are strong, return the first option.
